

Bias Correction of NARR Downward Shortwave Radiation Fluxes Using GOES Data

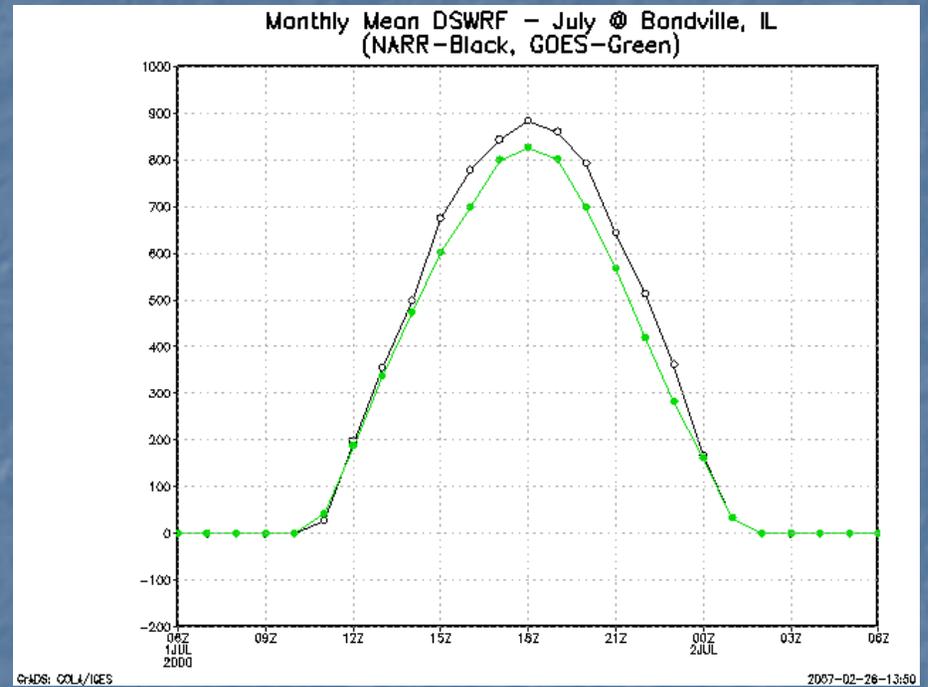

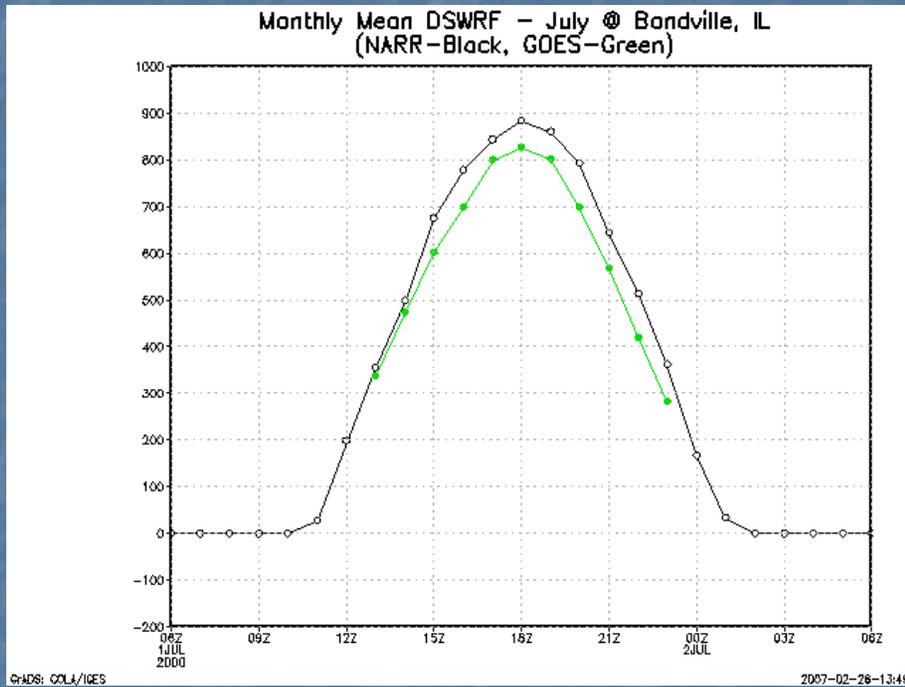

Charles J. Alonge and Brian A. Cosgrove
SAIC / NASA GSFC
Hydrological Sciences Branch
Code 614.3

Creation of Bias Correction Ratios

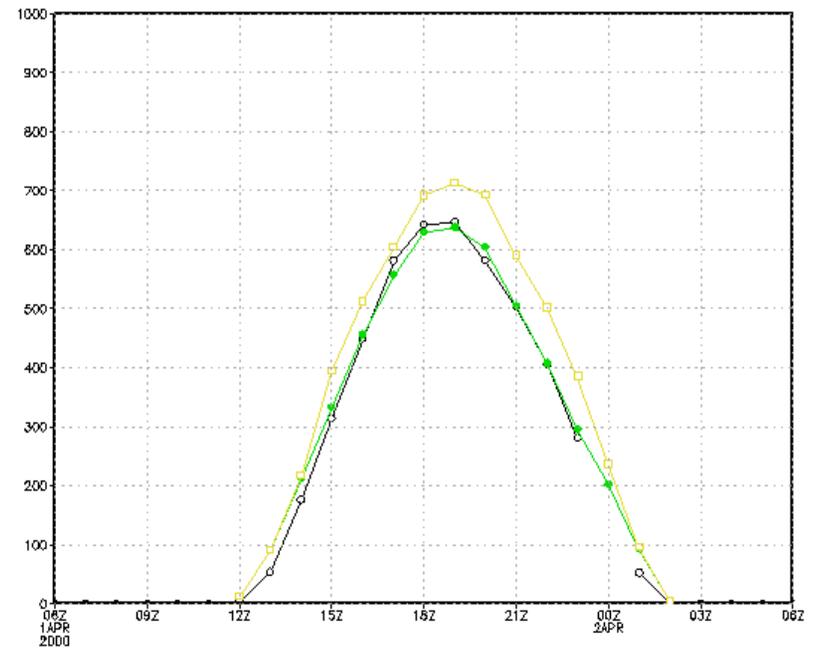

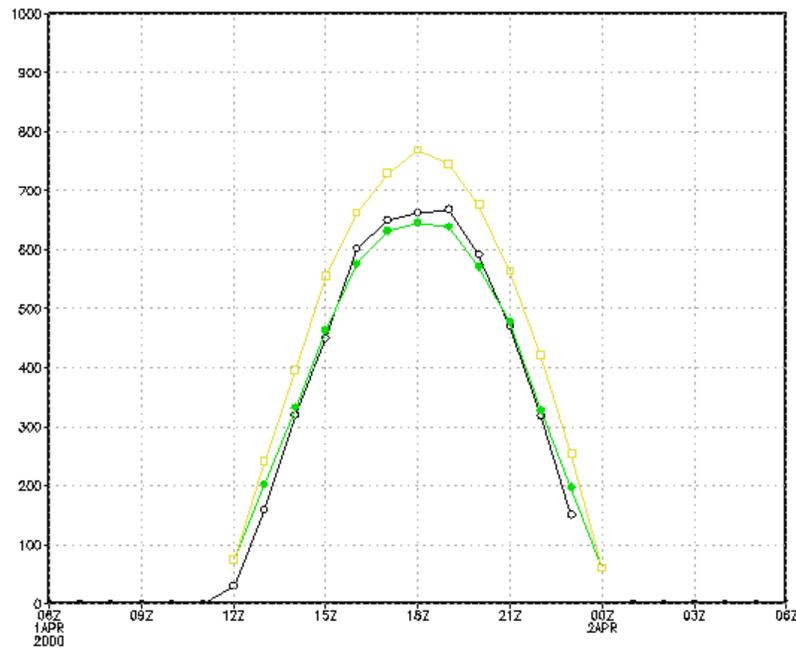

- 1/8th degree GOES product not defined for low zenith angles and pole-ward of 50N and east of 70W

Creation of Bias Correction Ratios

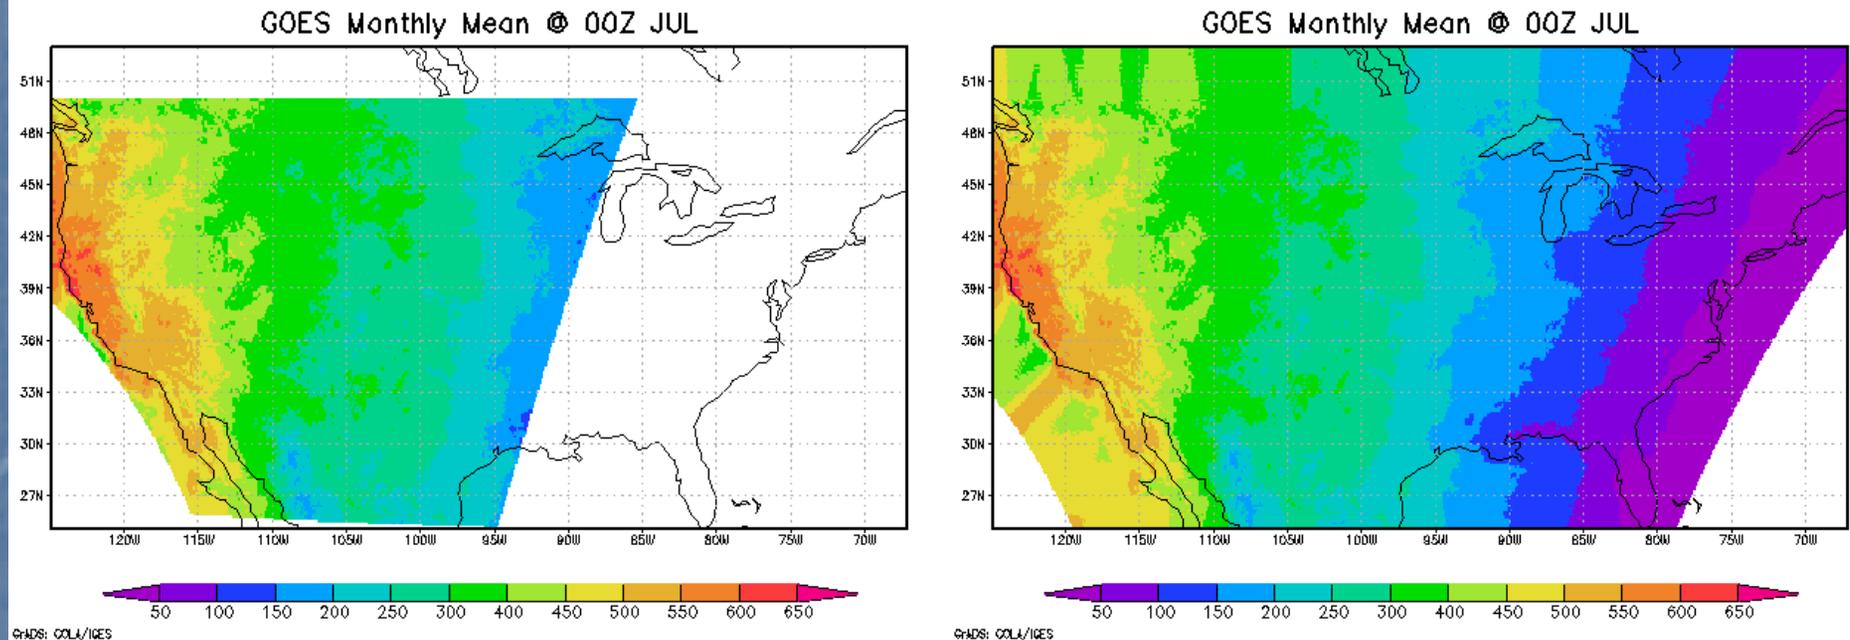

- Use zenith angle interpolation of mean fields to fill the gaps in areas located at low zenith angles

Verification of GOES Data (w/SURFRAD)

- Goodwin Creek, MS (left) and Fort Peck, MT (right)
- April 1997 monthly mean data
- SURFRAD – black, GOES – green, and NARR - yellow

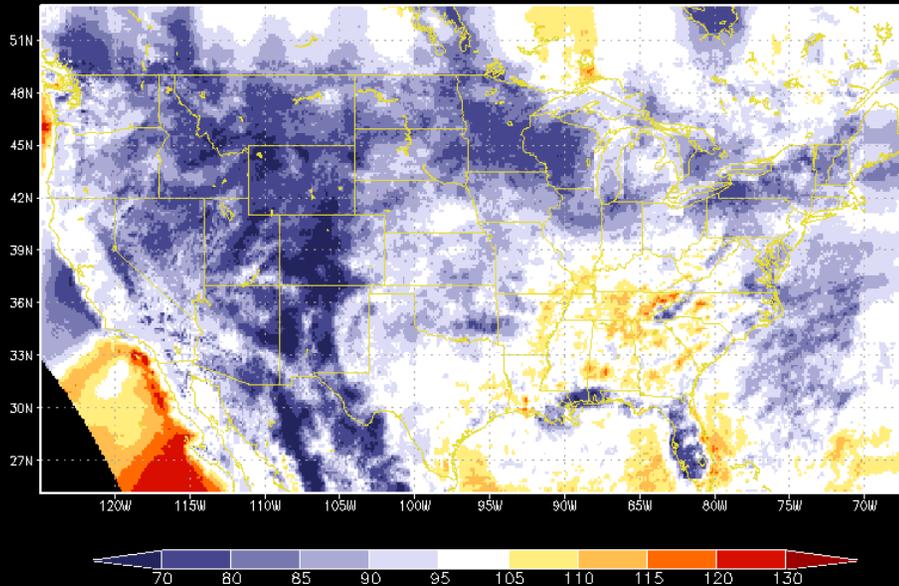

Creation of Bias Correction Ratios

- We can also extend data northward and eastward using neighbor search and zenith angle correction

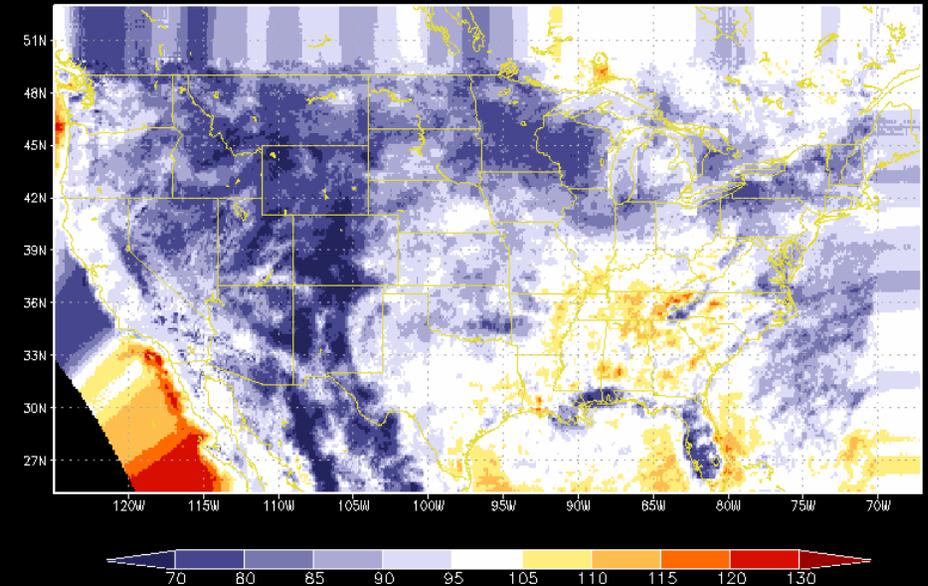

Creation of Bias Correction Ratios

GOES/NARR Bias Correction Ratio (%) 21Z JUL

Extend GOES mean data

GOES/NARR Bias Correction Ratio (%) 21Z JUL

Extend Ratio using closest 16 points

- Note: only one month used in producing this data

Sample Bias Correction Ratios
